Senior Consultant Engineering

Workplace: Berlin

You would like to bring your interest in technologies and software engineering into exciting projects? Then you are right with us. We are looking for Senior Consultants Engineering to strengthen our team.

As a consultant you are on the way in all phases of software development. Depending on the customer and project, you help with collecting and "translating" requirements. You analyze, evaluate and design architectures. Translating architectures into code is an integral part of your work. However, creating the software is not enough, you are accompanying the rollout of applications and you are helping to build meaningful monitoring structures for productive environments.

What we offer:

- Interesting customers and projects in various industries, from the startup to the group.
- An environment that allows you to build and deepen your knowledge of professional software development.
- The opportunity to develop yourself in a strong and international community not only professionally but also personally.
- A good work live balance and a small amount of travel in the consultation.
- Continuous training through a fixed budget to attend conferences, online courses, trainings etc.
- A friendly and multicultural team in the heart of Berlin.

What awaits you:

- You work on various software projects in various languages and technologies (eg Spring Boot with Java or Kotlin, Python, Rails, React, Vue.js, Kubernetes, AWS, Elasticsearch, GraphQL).
- You're there to accompany a business idea from the drawing board to the rolled-out Minimum Viable Product (MVP).
- You help our customers to further develop and modernize their existing applications.
- You advise our clients on modern development methods (such as agile methods, continuous delivery) and lead by example.
- You are there when new technologies are being tested and you are developing our "best practices" further.
- You develop solutions for technological as well as entrepreneurial challenges of our customers.

What we expect:

- Proven multi-year programming experience in a professional environment.
- vAbility to familiarize yourself with various business areas and to develop and represent customized technological solutions together with the customer.
- Fun working in a team.
- Experimentation and fun with new technologies.
- DevOps experience is desirable.
- Experience with modern development methods is desirable.
- Excellent English language skills in writing and writing.
